

POLFILM

The Art of Packaging

■ Company Profile

■ Who We Are

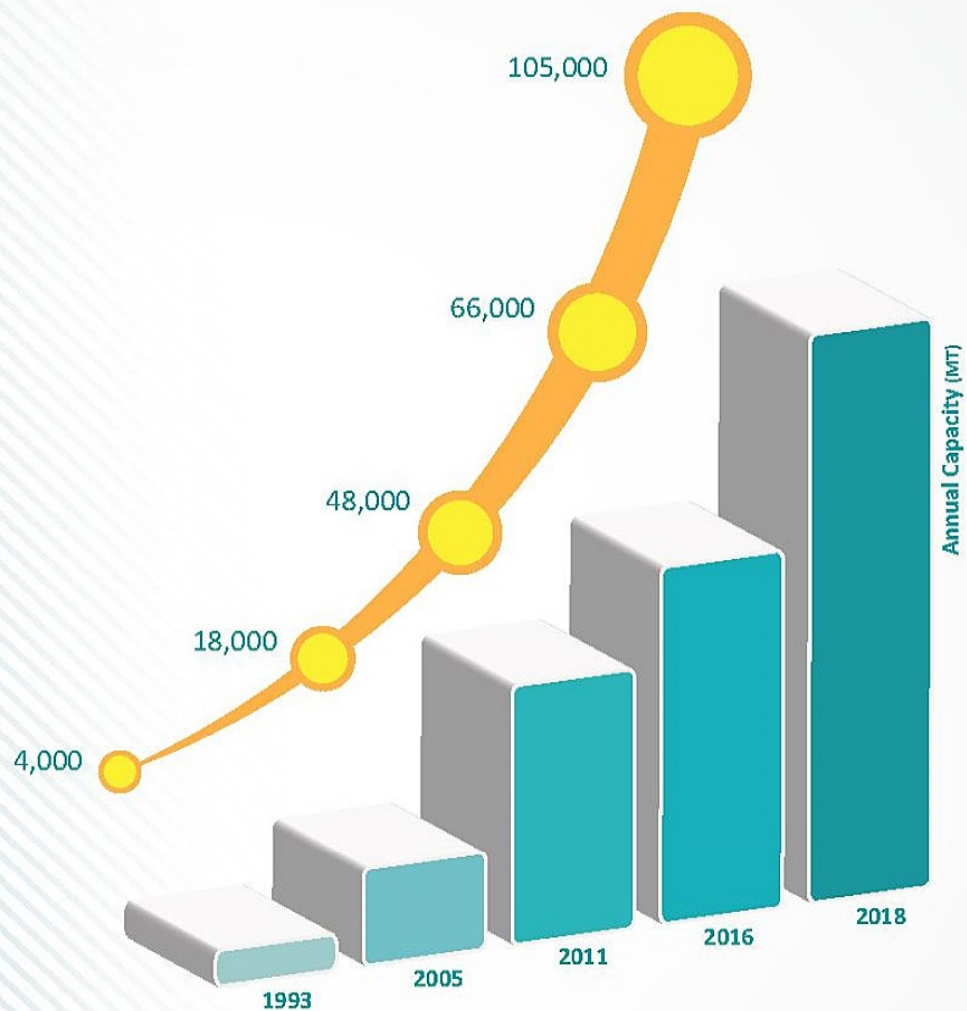

POLFILM is the first and largest leading manufacturer of BOPP films in Iran. While maintaining the best "product quality" for its customers has always been the top priority in its strategies, Polfilm has also kept a sustainable growth in its production capacity since the beginning. Starting with an annual capacity of 4000 MT in 1993, our capacity has now reached to 66000 MT per annum.

In addition to advanced BOPP production lines, POLFILM is equipped with three metalizing machines with a capacity of 24000 tons per year.

In line with the strategic development plan and company visions, POLFILM has launched an advanced and high-tech production plant of BOPET films «**PETCO plant**». This line, with a 40,000 MT production capacity in a year along with the new forth metalizing machine, enables our organization to provide a variety of BOPP and BOPET products for our customers satisfaction.

For over 20 years, we have developed, produced, and offered a full range of high quality films used in flexible packaging, labeling, paper lamination, and a variety of other industrial applications. We proudly produce more than 40 different products with different thicknesses starting from 10 up to 80 microns on BOPP films and 8 to 150 microns on BOPET films.

■ Milestones

2018

Launch of a BOPET production line « PETCO »

2016

Launch of the third BOPP production line

2011

acquisition of "ATLAS FILM" BOPP production line

2005

Launch of the second BOPP production line

1993

Foundation:
Launch of the first BOPP production line

■ Vision

Backed by creative, experienced, and knowledge-based human resources, we plan to reach the status of a global company providing innovative solutions in the field of flexible packaging.

■ Mission

Our mission is to manufacture and supply world-class and outstanding products and services with an emphasis on innovation and creative packaging solutions and also to create sustainable value for all key stakeholders.

■ Products

■ Flexible Packaging

POLFILM offers a variety of high quality BOPP films for packaging of food products such as snacks, ice-creams, candies, confectionary, etc.

The extensive range of our food packaging products meets the needs for a wide range of applications:

- Various appearances: transparent, matt, white voided, metalized, solid white, metalized white voided
- Different sealability options: Normal heat sealable, low SIT heat sealable, ultra low SIT heat sealable, and cold sealable
- Suitable surface treatment for printing process.

■ Labels

POLFILM offers a variety of high quality BOPP films for labeling applications:

- **Self Adhesive Labeling (SAL)**

- BOPP films designed to be used as face stock material in self adhesive labels
- All of our SAL products are primer coated for better UV printing
- Non-coated films are supplied upon request

- **In Mold Labeling (IML)**

- Specially developed BOPP films for IML applications
- Different appearances: Transparent, Matt, White Voided
- Various types: orange peel, high stiff, high yield, glossy or matt printable surface

- **Wrap Around Labeling (WAL)**

- To be used in high speed labeling machines
- Different appearances: Transparent, White Voided, Metalized, Metalized White Voided

■ Paper Lamination

POLFILM produces different BOPP Paper Lamination films having high antistatic properties to prevent dust accumulation. Our paper lamination films are suitable to be used in the production of business cards, catalogues, gift boxes, etc.

- Glossy
- Matt
- Metalized
- Golden Metalized

■ Technical Applications

- **Over Wrapping**

Specially designed high clarity films to be used on high speed overwrapping machines. These films can be used for overwrapping of tobacco, tea and other similar packs.

- **Textile Packaging**

High clarity textile packaging films with good antistatic properties to prevent dust accumulation on film surface.

- **Adhesive Tape**

Specially designed crystal clear films for adhesive tapes. Suitable for both water based acrylic and hot melt applications.

- **Release applications**

specially designed to be used as release layer wherever release properties is needed.

Quality System

We aim to provide new products and solutions at the highest level of quality. With several years of experience in the production and management of resources, POLFILM is trying to optimize its consumption of raw materials and energy. In this regard, POLFILM has been certificated for "Quality Management System ISO 9001", "Environmental Management System ISO 14001", and "health and safety management system OHSAS 18001".

POLFILM is trying to achieve customers' satisfaction by using food contact grade of raw materials for food packaging industries and permanent quality control of products. Therefore, all of our products are conformed to FDA and EU Regulations. POLFILM is now in the process of obtaining "BRC" certification.

■ Research and Developments

- The success of any product in this competitive market depends on continuous investment in research and development. Our R&D team focuses on development and creation of new products. For this purpose, POLFILM has dedicated an equipped R&D laboratory which is concentrated on developing innovative packaging solutions.
- We help our customers make their products more attractive and easier to use while offering them cost saving solutions.
- We are in regular contact with technical organizations and scientific institutes in order to identify market trends and relevant technologies.
