About US

COMPANY PROFILE

At NOGHRE FAM POU SH, our legacy lies in our difference. Using the most advanced European 7-layer production line and the latest testing technology along with our long experience in the field of flexible packaging creates the opportunity to focus on the value we bring to our customers through our differentiated Products.

First and foremost we create the best packaging for the specific application and use our creative solution to improve efficiencies in packaging process and improve our clients' profitability.

Noghre Fam Poush

Machine Stretch Film

Our cast machine film consistently outperforms all others for customers who are focused on better performance, less film used, and annual cost savings. No matter the application, our machine Stretch Films provides:

- > Very good puncture and tear resistance
- > Excellent stretch ability and cling properties
- > Perfect load securing and product protection

Hand Stretch Film

Hand stretch film is a top-class product that will delight customer with its excellent performance and technical parameters:

- > High clarity
- > Outstanding stretch ability and tear strength
- > Suitable for manual application with or without a hand roll dispenser

Silage Stretch Film

Our silage films are specifically designed to protect forage, while maintaining feed quality, to enhance animal health and performance.

- > Maximum stretch and elasticity.
- > Easy handling of bales and store crop nutrients.
- > Protective UV degradation.

Food Stretch Film

- Preserve freshness and keep taste of foods. High transparency and glossy appearance.
- Hygienic and Eco-friendly (100% recyclable).
- Our 7 layers food wrapping stretch can use in 3 different applications, such as home use in smaller rolls and catering that suitable for airlines, hotels, bakery shops and many more, and retail use that in super markets, etc.

Coreless

- > All stretch roll grades of NFP can supply without the paper core. This innovative technology reduces the amount of waste and roll weight by removing the cardboard core.

Prestretch

- > The pre-stretching process would increase the length and on the other hand reduce the usage of the film. This type of films is user friendly as the user does not have to use much physical strength. It helps to reduce packaging cost by decreasing the using of the film less than 50% than standard films. These films also provide up to 3 times more length than conventional films per volume.

✓ As a manufacturer we understand your needs for cost competitive and guaranteed product performance.

Talk to us for our tailored solution.

Our sales and technical teams on the ground offer a truly personal service, working closely with you to find the better solution for your require.
